

131) In java which class is considered as root for all classes?
132) state the methods of Object class?
133) When our class is direct child of Object class?
134) When our class is indirect child of Object class?
135) What is use of toString() method?
136) Which predefined classes has overridden toString() methods?
137) If we want to print hashCode of object then which method is used?
138) What is mean by hashCode?
139) What is use of Object class equals() method?
140) Object class equals() methods is meant for address comparison or content comparison?

141) What is contract between equals() and hashCode() method?
142) What is difference between length() method and length variable?
143) What is mean by immutability?
144) Why String is immutable?
145) What is difference between constant and immutability?
146) Explain need of SCP?
147) Why SCP like concept is available for String but not for StrinBuffer
148) In addition to String class which other classes objects are immutable?
149) What is main objective of wrapper classes?
150) How many wrapper classes are there?

151) What is use of valueOf() method?
152) What is use of xxxValue() method?
153) What is use of parseXXX() method?
154) What is use of toString() method?
155) What is autoboxing and auto-unboxing?
156) Autoboxing and auto-unboxing concept is introduced in version?
157) What is cloning?
158) What is purpose of cloning?
159) Types of cloning?
160) syntax of clone() method?
